The purpose of this course is to ensure the candidate has an advanced, deep understanding of the contents, requirements and interdependencies of the ISO/IEC 20000 standard and understands how the standard operates in a typical IT service provider organisation. Once qualified through to the practitioner level, candidates should understand and be able to apply the content of the ISO/IEC 20000 standard within currently certified organisations or those considering certification. Specifically candidates should be able to:

- Understand the purpose, use and application of Parts 1, 2, 3 and 5 of the standard
- Advise organisations in conformance to ISO/IEC 20000-1 and certification
- Understand, explain and advise regarding applicability and scope definition
- Understand and explain the relationship between ISO/IEC 20000 and ITSM best practices, ITIL, and related standards, ISO 9001 and ISO/IEC 27001
- Explain and apply the requirements of ISO/IEC 20000-1
- Explain the use of technology and tools to support the implementation and improvement of an SMS, the achievement of certification and the on-going demonstration of conformity to ISO/IEC 20000-1
- Advise and assist in ISO/IEC 20000 certification readiness assessments
- Produce gap analysis supported by improvement and implementation plans
- Understand, create, apply and evaluate a service management plan including the service management policy and objectives
- Understand, create, apply and evaluate processes, procedures, process specific plans and process specific policies required by ISO/IEC 20000-1
- Assist, advise and assess organisations on the implementation of continual improvement processes
- Advise, prepare and analyse organisations for an ISO/IEC 20000 certification audit
Who should attend this course?

The ISO/IEC 20000-1:2011 combined Foundation and Practitioner course would suit candidates working in the following professions or areas:

- Both IT and business people will benefit from this course
- Those requiring a good understanding of ITSM
- IT professionals or others working within an organisation that is aligned or planning to be aligned with the ISO/IEC 20000 suite of standards
- Anyone involved in or contributing to an on-going service improvement programme

Why ISO/IEC 20000?

ISO/IEC 20000 is an international IT standard that allows companies to demonstrate excellence and prove best practice in IT management. The standard ensures companies can achieve evidence-based benchmarks to continuously improve their delivery of IT services. The standard is based on the ITIL® best practice framework for IT Service Management. Originally released in 2005 as the first worldwide standard specifically aimed at IT Service Management, it quickly became a competitive differentiator for organisations delivering IT services and has subsequently strengthened with the recent release of an updated version in 2011. ISO/IEC 20000 promotes the adoption of an integrated process approach to effectively deliver managed services to meet the business and customer requirements.

Setting a new standard

With consultants placed world-wide, Syzygal is a provider of professional development education, e-learning and consulting solutions.
